

What is New in Version 3.13.0313

OPC Toolbox

The following points have been implemented in the OPC Toolbox C++ V3.13.0313 since the V3.12.

OPC Toolbox C++

Microsoft Visual Studio.NET 2003 Support

The OPC Toolbox C++ now supports the new Microsoft development environment Visual Studio.NET 2003.

SODaS (OPC Data Access Server Library)

- Removed the dependency between the synchronous GetItemProperties call and asynchronous OnDataChange callbacks. A deadlock in the server occurred if the client called GetItemProperties inside the callback.
- Now the cyclic transaction of a group is released with an unadvise of the notification connection.

SODaC (OPC Data Access Client Library)

- Corrected the incorrect reference counting in the write methods of SODaCGroup.

XPress OPC Tool

Integrated the changes of the OPC Toolbox C++.
