

What is new in Version 3.21.0410

OPC Toolbox XPress

The following points have been implemented in the OPC Toolbox C++ V3.21.0410 since the V3.20.

- Added the m_acknowledge member to SOXpSAEConditionData.
- The IOPCItemIO::WriteVQT call now works correct.
- Assignment of active message instead of the definition in SOXpSCreateConditionClass during active alarm.

ATTENTION:

You have to specify the version 3.21 in the version info at the SOXpSInitialize call, because the SOXpSAEConditionData structure was changed since the V3.20.
