

What is new in Version 4.01.0467

OPC Toolbox C++

The following points have been implemented in the OPC Toolbox C++ V4.01.0467 since the V4.00.

- Support the OPC Security specification (only IOPCSecurityPrivate interface).

SODaS (OPC Data Access Server Library)

- Calling IOPCItemMgt::SetActiveState for inactive items now generates a OnDataChange callback instead of the OnReadComplete callback before.
- Removed reason for warnings in CTT read and write stress test cases.

SOAeC (OPC Alarms and Events Client Library)

- The event sink object of a subscription is now released with the Unadvise call.

SOSrv (Server Library)

- Added missing #pragma pack(pop) to the SOSrvWatch.h include file

SOCmn (Common Library)

- Removed stack overflow with large strings in SOCmnString::cloneToWCHAR
- Removed possible memory access problem in SOCmnList::add
