

What is new in version 4.20

After more than 10 years of successful OPC Toolkit development, the OPC Toolbox with almost 20 toolkits has been redesigned.

It has also been prepared for the portation to any operating system and the inclusion of **OPC Unified Architecture**.

What is new:

- Simple but powerful API enabling the future integration of both the "classic" DCOM-based toolkits, including XML-DA, and the "new" OPC UA toolkits
- Support of Windows Vista
- .NET Alarms&Events Server Toolkit
- .NET Data Access Controls as part of the .NET Client Toolkit
- Both C++ and .NET development is supported in the DA, AE and XML-DA toolkits
- There are runtime licenses available for all toolkits (except for Linux)
